## CASE HISTORY

**Project:** Injection of Chlorine  
Contact Chamber

**Owner:** Augusta Water District

**Injection  
System:** BBZ Duroseal Inject 2000

**Completed:** October 1996

Jean's Waterproofing, Inc. (JWI) was contracted by Augusta Water District (AWD) to eliminate water migrating out of and into AWD's chlorine contact chamber. JWI recommended the use of BBZ Duroseal Inject 2000 for this project. The low viscosity of the Duroseal Inject 2000 allowed the injection of cracks presently leaking, which had been injected with urethane foams during construction few years ago. JWI prepared all areas for the injection process. JWI's state of the art injection pump was employed for placement of the Duroseal Inject 2000. After the injection process was completed, all water leakage was eliminated.
