

CASE HISTORY

Kevin James, of Kevja Construction, was contracted by the New York City School Construction Authority to perform injection work at Jackie Robinson JHS 13 in Manhattan.

The scope included a basement boiler room with several water leaks emanating from cracks and joints in the walls and floor and a sump pit with a severe leak through a construction joint.

As BBZ Injections Resins were specified, Kevin James contacted BBZ, USA who recommended Jean's Waterproofing (JW), a qualified BBZ applicator to perform the work

JW mobilized on two occasions and successfully injected 297 l.f.
