

CASE HISTORY

Project: Wilder Station
White River Junction, Vermont

Owner: PG &E Generating Company

Injection System: BBZ Duro Rapid

Area Injected: 2 Expansion Joints

Completed: June 2000

Jean's Waterproofing, Inc. (JW) was contracted by this Owner to stop 2 leaking expansion joints in Wilder Station's fish ladder. This ladder was constructed in the mid 1980's and allows Atlantic Salmon and Shad to migrate upstream.

The expansion joints were constructed of corkboard with urethane sealant sealing the exterior of the expansion joint. JW utilized BBZ Duro Rapid as the injection resin in the leaking expansion joints. BBZ Duro Rapid was selected because of the excellent physical properties it offers. JW has had tremendous success with BBZ Duro Rapid. These expansion joints move significantly between the heat of the summer and the bitter cold temperatures of Vermont in the winter. BBZ Duro Rapid will provide excellent leak proof service for many years to this fish ladder.
